Evangelos P. Doukakis
Software Engineer

Since 2014, Computer and Software Engineering

Evangelos is an enthusiastic Software Engineer. He has attained an MSc-equivalent degree in ECE from the National Technical University of Athens. During his studies, he has acquired substantial experience in operating systems, algorithm theory, computer graphics, networks, as well as applied physics and mathematics. He has experience with Java, C/C++, Python, SQL and other programming languages.

In EMTech, he contributes in the whole software lifecycle development of specialized space engineering software and has gotten familiar with the ESA/ESOC programming standards. Specifically he has been involved in the design, documentation and development of SMP2-compliant simulation models.

Evangelos loves building stuff… with or without a computer.
